

Special Junk Mill type FTS4-NV

The Special Junk Mill FTS4-NV is used to destruct metal objects, cement stone, packer-plug during repair and recovery works in the well with coiled tubing units.

The Special Junk Mill consists of body made of high-strength alloy steel and cutting and grinding dressing with crushed tungsten carbide introduced into matrix of nickel-containing brass. Blades are dressed with powder alloy "Eutalloy" in order to reduce wear and tear of body.
